### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The restriction requirement has been withdrawn and the non-elected claims have been rejoined. All pending claims are allowed. The withdrawn claims either depend from allowed claims drawn to the elected invention, or contain the same allowable subject matter. Thus the rejoinder.

2. It is noted that during the interview of March 22, 2006, it was agreed to change in claim 1 "without further movements of the operator steering control" to "turned to either of the first or second maximum turning positions". Applicant in the supplemental amendment filed April 18, 2006 failed to make this amendment as applicant only deleted from claim 1 "without further movements of the operator steering control". During the interview it was felt that this change was needed to increase the clarity of claim 1; however, upon further examination of claim 1, claim 1 as filed April 18, 2006 is sufficiently clear and allowable.

3. The claims are allowed because of:

the limitations defining a force detection assembly configured to sense a force further applied to the operator steering control after the operator steering control is turned to either of the first and second maximum turning positions and a control system

configured to increase an output of the propulsion unit, rotate a pair of deflectors or rotate one rudder in response to this further applied force, or limitations similar thereto;

and applicant's arguments as to why the combination of Matsuda et al and Morrison is lacking.
